**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-7,13-17,19,20-23 and 34 are rejected under 35 U.S.C. 102(e) as being anticipated by Boggs. Boggs shows an articulating bating and support device comprising two articulating connectors pairs (see col. 2-3 lines 69-3) joined by one or more lateral braces that can be sized to set to relative position of an anterior articulating connector. having a superior (2) connecting member positionable about a coplanar arc of movement. A positioning stand comprises an anterior and posterior chassis support frame (2,3). Boggs further shows a transverse brace (as shown in figs. 2-4) and a head and thorax support frame (6) along a with a lower extremity support (4).

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 3636

Claims 8-12,18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Boggs in view of Chun-Yueh. Boggs shows all of the teachings of the claimed invention except the use of an articulating connector with a superior and inferior. Chun-Yueh shows the use of an articulating member with a superior (see Fig. 2) and inferior connecting member (40). It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the connecting member of Boggs with the teachings of Chun-Yueh, in order to provide additional stability for the support. Consequently, the method steps as recited would have been incorporated within the use of the invention as taught by Chun-Yueh.

4. Claims 24-33 are rejected under 35 U.S.C. 103(a) as being unpatentable over Boggs. Boggs shows all of the teachings of the claimed invention. Consequently, the method steps as recited would have been incorporated within the use of the invention as taught by Chun-Yueh.

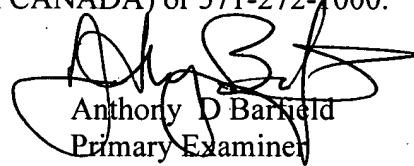

#### ***Response to Arguments***

5. Applicant's arguments with respect to claims 1-4,6-13,15-20 and 34 have been considered but are moot in view of the new ground(s) of rejection.
